

AVANISH TIWARI

Senior Scripting Executive — Fullstack Development (React, Node.js)

Noida, India | Open to Relocation | avanishtiware@outlook.in | +91 9015050012

SUMMARY

Scripting and software development professional with 5+ years designing survey logic and reusable templates, and coding and testing the software (React, Node.js) that delivers them — covering the full SDLC from functional design through documentation and deployment. Builds and integrates REST APIs, relational data models, and authentication (JWT, bcrypt) into cohesive systems. Also builds independent fullstack and privacy-focused AI projects outside of work. Agile team environment; uses AI tools (Groq/LLM APIs) to speed up routine development tasks. IBM SkillsBuild-certified in Back-End Development.

SKILLS & TECHNICAL EXPERTISE

- Component Design & Development: React.js, Next.js, Node.js, Express.js — functional/technical design of reusable components and modules
- Coding, Testing & Documentation: JavaScript (ES6+), TypeScript, Jest, Git/GitHub, code reviews, technical documentation of designs and components
- System Assembly & Integration: REST API design and integration, PostgreSQL, Prisma ORM, third-party API integration (Groq/Llama 3.3 70B), Express middleware
- Methodologies & Tools: Agile (Jira), Webpack, Babel, Vite, Socket.io, Linux, MVC architecture, Data Structures
- AI-Assisted Development: Practical experience integrating and leveraging AI/LLM tools (Groq API) within production applications; building local/on-device AI engines (Chrome AI, WebGPU, WASM)

EXPERIENCE

Senior Scripting Executive — Ipsos

May 2025 – Present

- Script and maintain survey logic — branching, skip patterns, and quota rules — for live survey operations
- Build reusable question-block templates and React-based components that let non-technical teams assemble new surveys faster
- Document component and template designs so other scripters/developers can reuse and maintain them
- Collaborate cross-functionally on API integration, debugging, and feature delivery — incorporating feedback from senior stakeholders
- Improved UI performance by 25% and build efficiency by 40%; contributed to microfrontend architecture for scalable survey tooling

Scripting Executive — Ipsos

Oct 2022 – Apr 2025

- Scripted and tested survey logic and validation rules for responsive survey interfaces, reducing rework from bad logic paths
- Created and documented reusable survey templates and components, cutting survey build time by 30%
- Improved code quality and maintainability through documented best practices and code reviews

Frontend Developer — Phronesis Partners

Nov 2021 – Oct 2022

- Modernized survey/application templates with code-splitting and lazy loading; scripted and integrated REST APIs behind the logic layer
- Improved application load time by 60% and enhanced SEO performance

Product Trainee — Ameyo

Feb 2021 – Oct 2021

- Assisted in backend and product development using Linux and PostgreSQL, supporting solution implementation for IT requirements

KEY PROJECTS

Private AI Shield — React (JavaScript), Chrome AI (Gemini Nano), WebGPU, WASM

- Building a privacy-first browser tool that runs AI assistance on sensitive text entirely on-device — no backend, no external AI API calls
- Designed a layered AI engine architecture (Chrome AI → WebGPU → WASM → Mock fallback) via an AIEngine interface and factory pattern
- Built a PrivacyController and regex-based PIIDetector that surfaces a live warning banner as the user types sensitive data
- Integrated on-device model runtimes — Gemini Nano (Chrome), Llama-3.2-1B via WebGPU, and Qwen2.5-0.5B via WASM — with automatic fallback between them
- Deployed to Vercel and tested across Chrome and Safari

AI TaskFlow — *React, Vite, Node.js, Express.js, PostgreSQL, Prisma, Groq API*

- Designed and assembled a fullstack task management system integrating Groq AI (Llama 3.3 70B) via a secure backend component
- Documented and resolved Prisma v7 breaking changes and CORS integration issues during production deployment
- Deployed frontend (Vercel) and backend (Render) components with environment-based configuration — Live: <https://ai-task-flow-five.vercel.app>

Job Application Tracker — *React, Node.js, Express.js, PostgreSQL, JWT, bcrypt*

- Designed relational PostgreSQL schema (users, jobs) with cascading deletes; implemented full CRUD REST API
- Implemented JWT authentication and Express middleware to secure API routes — Live: <https://job-tracker-sage-seven.vercel.app>

Countries Explorer — *React, Node.js, Express.js, PostgreSQL, JWT, bcrypt*

- Built a secure REST API component with JWT auth and bcrypt password hashing; integrated cloud PostgreSQL (Neon)
- Implemented a proxy-pattern Express middleware (verifyToken) to assemble and protect API access to an external data system

EDUCATION

B.Tech, Computer Science — United College of Engineering, AKTU (2016–2020)

CERTIFICATIONS

- Back-End Development — IBM SkillsBuild (Mar 2026)
- React — Scaler | JavaScript Algorithms — freeCodeCamp | Linux — Udemy
- Agile Software Development — LinkedIn Learning | Node.js Essential Training — LinkedIn Learning
